

1 **ABSTRACT OF THE DISCLOSURE**

2 A container for making tea includes a body having a receiving
3 space defined therein, and extending therethrough to define a first
4 opening in a top and a second opening in a bottom. A resilient pad is
5 attached to the top of the body for closing the first opening. A seam is
6 centrally defined in the resilient pad for exhausting expanding hot air in
7 the body. A cap is detachably mounted to the top of the body to hold the
8 resilient pad in place. The cap has a through hole centrally defined
9 therein and aligning with the seam in the resilient pad. A filter cup is
10 inversely received in the receiving space corresponding to the second
11 opening for containing tea leaves. A cover is detachably mounted to the
12 bottom of the body for closing the second opening and holding the filter
13 cup in place.
